

Aruba Petroleum, Inc.™

In the early 1990's, the North Texas plains began rumbling with promise. Now, it has grown into a full-grown, roaring revolution in oil and gas production. Unconventional drilling technologies and techniques, in particular horizontal drilling, have rejuvenated the entire industry. We now have the capability to produce far more oil, natural gas and gas liquids than anyone dreamed possible. Just as importantly, we are now discovering vast new reservoirs that can be tapped by horizontal drilling.

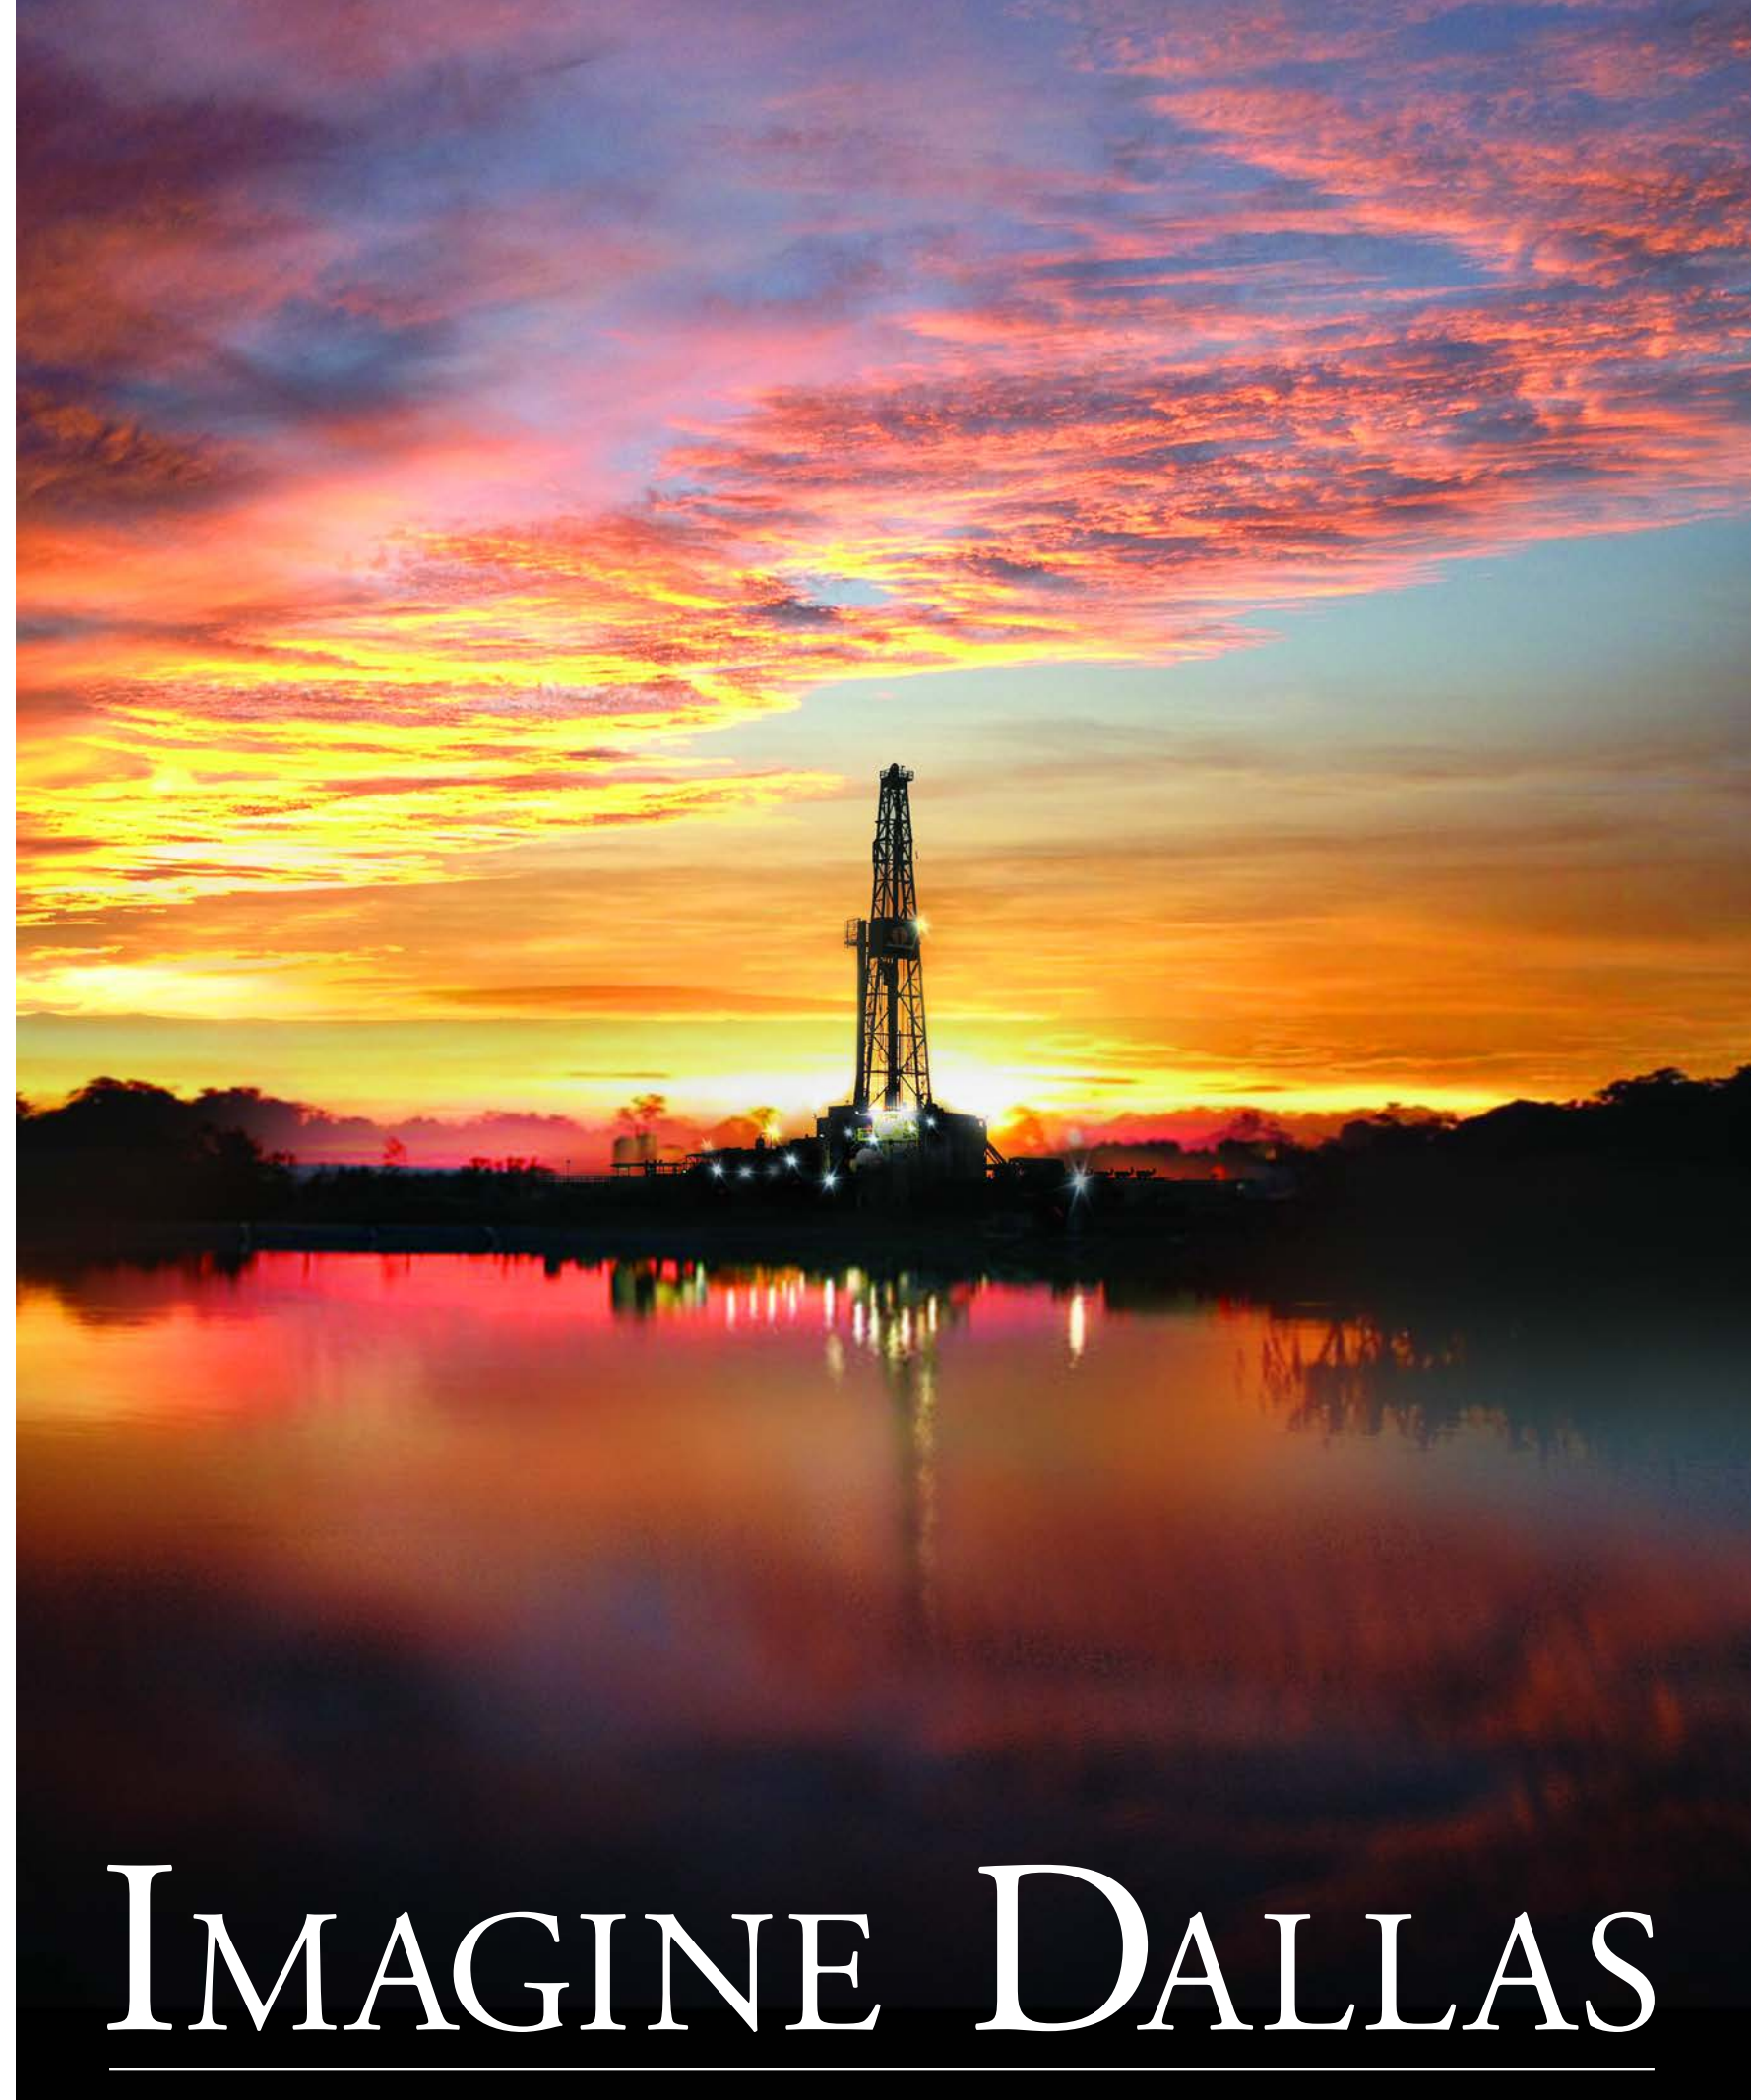

There, right at ground zero of the revolution, sits Aruba Petroleum. We're in the right place at the right time. We've mastered these unconventional techniques. Horizontal drilling is what we know and what we do. With hundreds of wells under our belt, very few do it as well.

Aruba Petroleum is fully committed to quality and performance. That's why we have a comprehensive field operation with geologists, land specialists and drill site supervisors all on staff. The Aruba operations model calls for best practices and constant monitoring to keep costs in check. In fact, we only drill where we know we can keep our costs satisfactory.

Aruba Petroleum, Inc.™

Differences that make Aruba positively compelling:

Aruba is distinctive among independent oil and gas producers. Our experience, expertise, commitment to the field, and cost containment set us apart, improving our margins and enabling us to perform at a high level over the long haul.
